### Synthetic Risk and Reward Indicator (SRRI)

**KEY RISKS:** A Money Market Fund (MMF) is not a guaranteed investment vehicle. An investment in MMFs is different from an investment in deposits; the principal invested in an MMF is capable of fluctuation and the risk of loss of the principal is to be borne by the investor. The MMF does not rely on external support for guaranteeing the liquidity of the MMF or stabilising the NAV per share. Short Term Money Market Funds do not generally experience extreme price variations. Changes in interest rates will impact the Fund. On any day where the net return (i.e. return less costs and expenses) of the Fund is negative an Accumulating Share Class of the fund will see a decrease in the NAV per Share.

**Capital at Risk:** All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed.

**Counterparty Risk:** The insolvency of any institutions providing services such as the safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Underlying Fund to financial loss.

**Credit Risk:** The issuer of a financial asset held within the Underlying Fund may not pay income or repay capital to the Fund when due.
